

 **Penn**

Powerful, versatile peripheral integration

# ||| Penn Peripherals without the Panel – Anywhere on the Network

**The PENN (Peripheral Expansion Network Node) from Advanced is your key to unlocking greater power and versatility for your fire system.**

Whether designed into new installations or retrofitted to existing systems, the PENN allows you to access Advanced’s comprehensive range of peripherals without needing to install additional panels – saving you time and money.

### The PENN:

- Allows you to expand/reconfigure your fire system without affecting the existing installation.
- Lets you install peripherals in locations that would be impossible to access by other means.
- Helps you to reduce costs and disruption by allowing remote inputs and outputs to be connected directly to the network instead of having to wire them back to a panel, which may be distantly located.

The PENN can be used to add a wide spectrum of features to Advanced’s MxPro 4, MxPro 5 and Axis EN fire panel ranges.

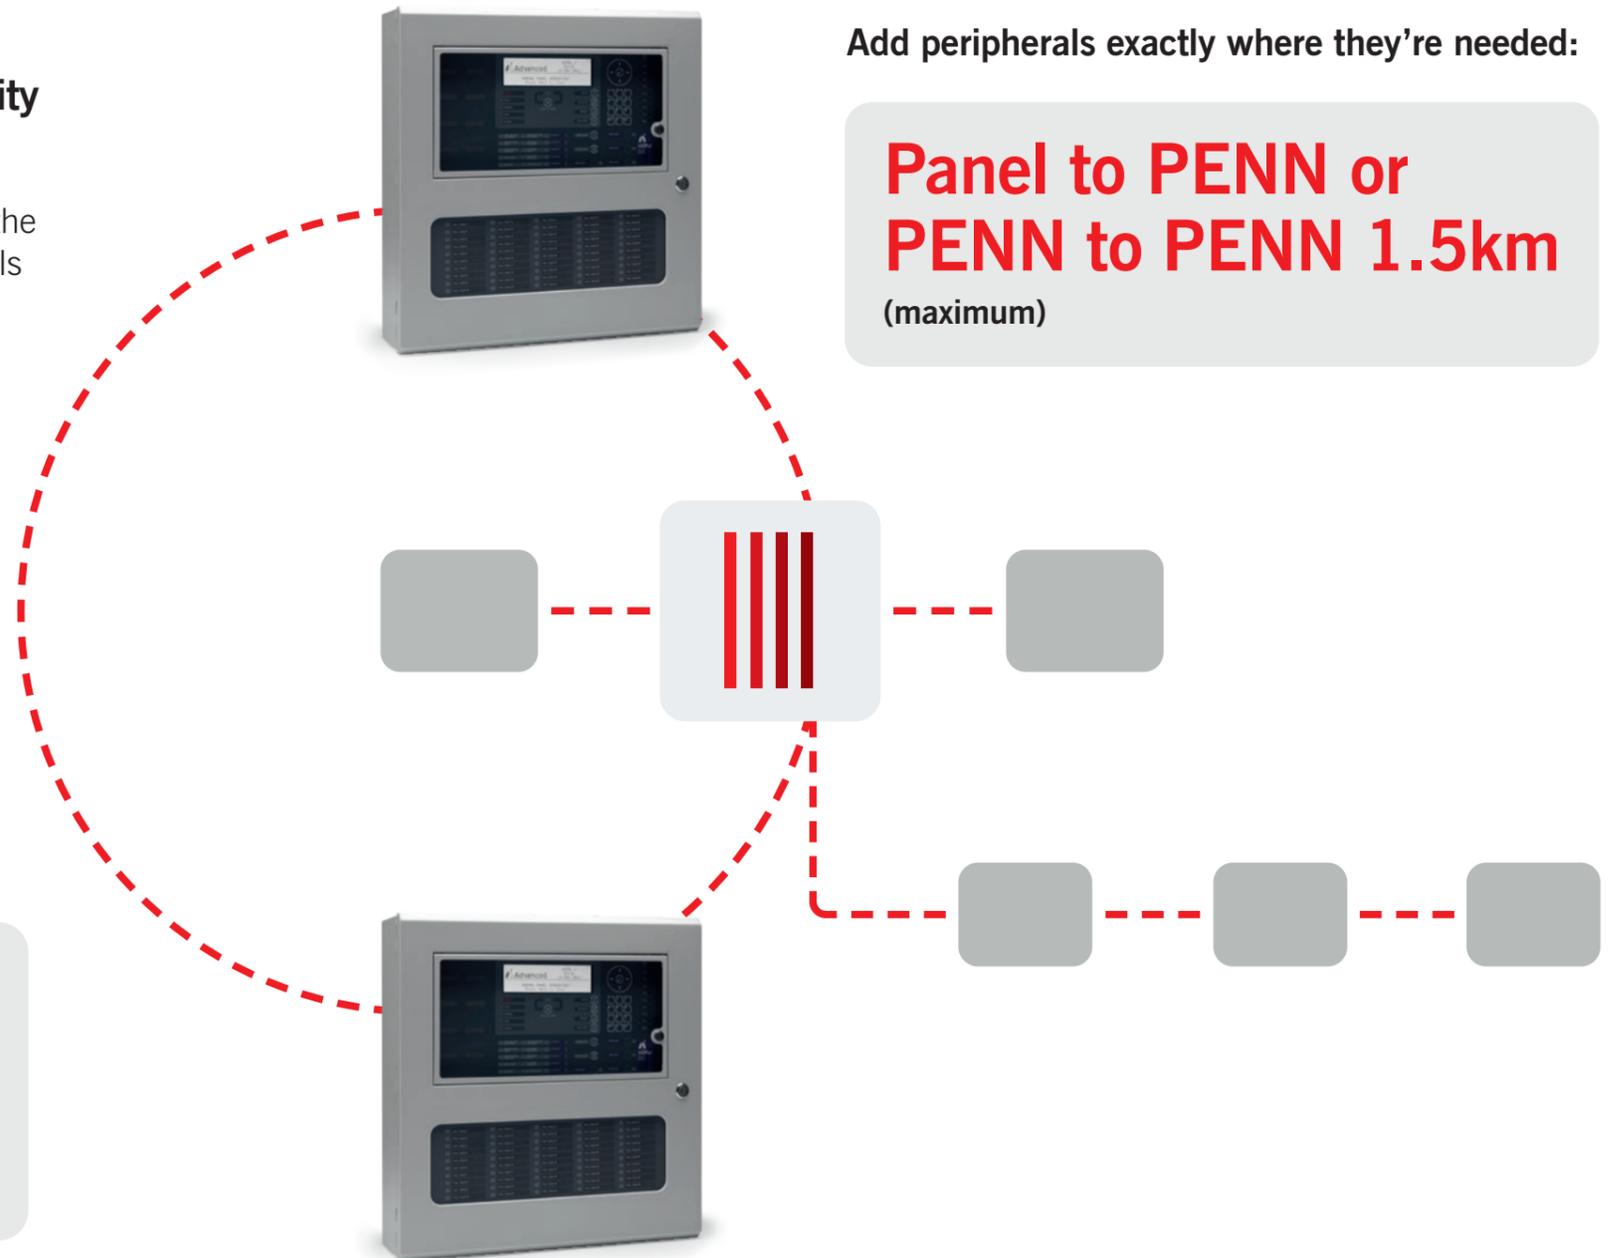

## DynamixTools

As you’d expect from Advanced, PENN configuration is straightforward using our DynamixTools software, but should you need any help, free technical support is included as standard.

Add up to  
**6,368**  
peripherals to  
the network

Add peripherals exactly where they’re needed:

**Panel to PENN or  
PENN to PENN 1.5km**  
(maximum)

**Key**

- P-Bus
- Ribbon Cable
- RS-232

MXP-545 (Standard)  
MXP-545/FT (Fault-Tolerant)

### Input Card

Gather data from third party peripheral devices e.g. air sampling units, flow switches, door contacts, dampers etc.

- 10 individually programmable switch inputs
- Monitored for open/short circuits
- Connect 16 cards to give 160 additional monitored inputs

MXP-537

### Fan/Smoke Control

Integrate your fan and damper status monitoring and control into your fire system.

- Access smoke control and fire system data from one common central command centre
- Control up to 6 fans and/or dampers per card
- Reduce time and cost through less cabling and by eliminating third party installation
- Auto/manual control and automatic testing

MXP-543

### Peripheral Relay Card

Control ancillary equipment e.g. magnetic door latches, fans/dampers, vents, lifts etc.

- Ideal for when many relay outputs are required for simple on/off signaling or control
- Provides 4 individually programmable relay output circuits
- All outputs are synchronised
- 230V AC 5A/30V DC 5A programmable relay outputs

MXP-035

### 4-Way Programmable Sounder Card

Expand the control panel sounder circuit beyond the four built into our panels.

- 4 individually programmable and monitored sounder output circuits compliant with BS EN54-2: 1998 Clause 7.8
- 1A rated and monitored for open and short circuits so issues are immediately flagged
- Connect up to 16 cards to give up to 64 additional local sounder outputs
- All outputs are fully synchronised

MXP-034

### Peripheral Bus I/O Card

Add LEDs and switches to panels for more precise indication and control.

- Connect up to 16 I/O cards per peripheral bus providing 768 outputs and 256 inputs
- Ideal for boxed mimic enclosures or sprinkler indication panels
- Optional relay expansion boards converting LED outputs to VFCO

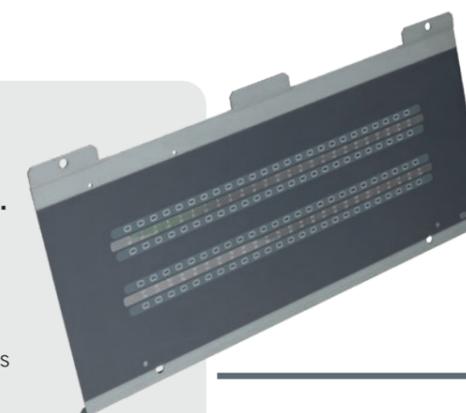

MXP-539

### Zonal LED Indicator Card

Add up to 2000 LED indicators to your system.

- Fully programmable
- Supports dynamic zoning to provide clear indication of events on the system
- Red and yellow LED indication options and slide-in labels

MXP-513

# Penn

MXP-545 (Standard)  
MXP-545/FT (Fault-Tolerant)

## Thermal Printer

Quickly pass critical fire system information to the Responsible Person/firefighters.

- Automatic/on-demand printouts of event log/status information
- Easy access, front-loading for quick, easy thermal paper replacement
- In-built battery backup
- Fast and silent

MXP-512

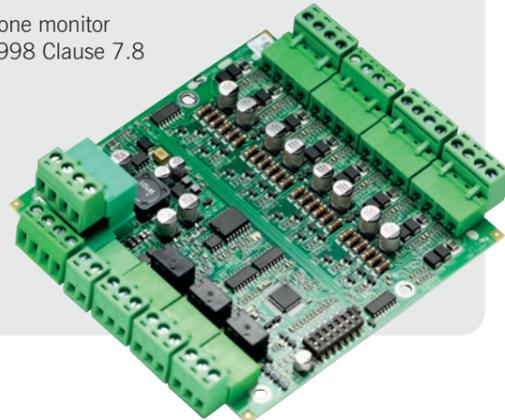

## 8-Way Programmable Zone Monitor Card

Connect conventional detection devices to an addressable system.

- Provides 8 individually programmable zone monitor circuits compliant with BS EN54-18: 1998 Clause 7.8
- Each zone is fully programmable
- Compatible with various brands of conventional device
- Connect up to 16 cards to give up to 128 additional zone monitor circuits

MXP-536

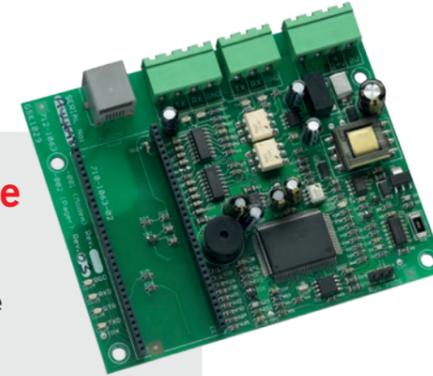

## Pager Interface (ESPA)

Rapidly communicate critical fire system information to the Responsible Person's pager.

- Connect LifeLine or third party paging systems to the network
- Serial data connection to pager hardware
- Optional input for monitoring pager fault conditions
- Supports up to 8 configurable shifts per weekday/weekend
- Option to route specific event notification to specific pagers
- Compliant with all ESPA 4.4.4. pager systems

MXP-547

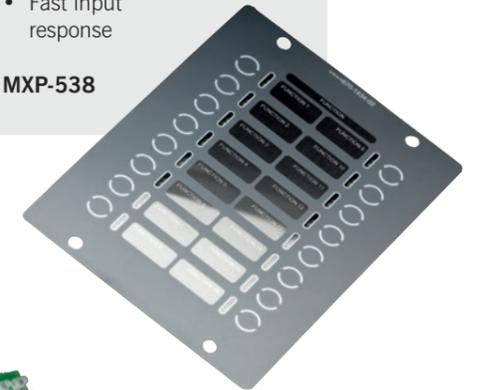

## Peripheral Switch Card

Manual control of any fire system function.

- 16 programmable switches
- 48 configurable LED indicators
- Configurable buzzer
- Fast input response

MXP-538

## Display

Add supplementary displays where required on the network.

- LCD display
- 24 programmable LEDs
- 8 key switch connections
- Silence/repeat
- Evacuate button

MXS-504

### Key

- P-Bus
- Ribbon Cable
- RS-232
